

Adheres pesticide solutions to plant surfaces

BACK FIELDTM

Sticker

- Extended weather resistant protection for pesticide applications allows maximized efficacy
- Holds pesticides and nutrients in place through rainfall or irrigation

Adding **Back Field™** to a spray solution helps to spread the active ingredients throughout the plant canopy and bonds them to the foliage surfaces for maximized results. Rain or shine, **Back Field™** extends the duration that nutrients and pesticides remain in contact with plant surfaces, giving them the time they need to perform.

- Weather resistant protection of sprayed pesticides and nutrients
 - Rainfastness prevents actives from being washed off
- Compatible with most pesticides and other tank mix partners

IDEAL FOR

- Extending the flexibility of application timing
- Reducing quick foliage burndown which increases the time necessary for pesticide permeation
- Protecting transplants from excessive sunlight and wind desiccation until acclimated

Available In:
1 Gallon Jugs

HOW IT WORKS

Back Field™ is composed of pinene polymers and emulsifiers that give it the unique ability to emulsify in the tank mix and spread throughout the crop canopy before slowly drying to a thin, weather-resistant film. The slower drying time enables the pesticide to diffuse into the leaf cellular structure resulting in a more thorough uptake by the target plant before burndown. The film does not interfere with photosynthesis, but it does protect the crop from excessive sunlight damage which makes it equally valuable for use with fertilizer and micronutrient applications.

HOW TO USE

Always follow the directions on the pesticide label for adjuvant use. If there is no specific procedure provided, follow the recommendations below:

- Spray with confidence after reducing the chance for cross contamination by cleaning equipment with **Onside Kick™**
- Fill tank half full with water and add an antifoaming agent such as **Reverse™**, if necessary
- Begin agitation and add pesticide or other active ingredients
- Add **Back Field™** and continue agitation
- Spray on a sunny day, a minimum of one hour before expected rainfall, to activate the **Back Field™** bond with the leaf surface

APPLICATION RATES

Herbicides, insecticides, fungicides	4-6 ounces per 100 gallons of spray
---	-------------------------------------

Nutrients or as a transplant solution	4 ounces per 100 gallons of spray
--	-----------------------------------

**Applications at the higher rate with certain pesticides may leave a visible residue.
If this is a potential problem, use the lower application rate.**

QUALITY ASSURANCE

Exacto® products are manufactured with pride at our production facility in Sharon, Wisconsin. Each batch is inspected by our Quality Assurance Team to ensure it meets our high standards.
