

# RPO™

Untreated

RPO

*Drought stressed putting green, University of California Riverside, 2022*

## Wetting Agent that improves water retention

- Improves consistent distribution of irrigation and precipitation throughout the root zone
- Reduces wetting resistance associated with localized dry spots (LDS) and environmental stress in highly managed turf
- Recommended for use throughout the season to improve soil moisture depth and lateral permeation on golf courses, athletic fields and recently seeded or established turf in domestic and commercial locations
- Designed for use on sandy and fine-textured non-sandy soils

## Directions for use

The most common use rate is 4 oz. per 1000 sq. ft. but see the label for recommendations for your use case. For best results, apply before drought conditions appear and follow all applications with 0.33" water.
